	This is an indexed product - your average price per kWh each month is determined by using the below predetermined formula.			
	Average Price per kWh = $\frac{((\text{Applicable Base Charge} + \text{TDU Delivery Charge per billing cycle}) + (\text{Monthly Billed Usage kWhs}) \times (\text{Energy Charge} + \text{TDU Delivery Charges per kWh})) - ((\text{Energy Charge} + \text{TDU Delivery Charges per kWh}) \times \text{Mornings and Nights kWh usage})}{\text{Monthly Billed Usage kWhs}}$			
This price disclosure is an example based on average prices - your price for electricity service will vary according to your actual usage.				
For updated TDU Delivery Charges please go to <a href="https://mygexa2.gexaenergy.com/tdu-charges">https://mygexa2.gexaenergy.com/tdu-charges</a> TDU Delivery Charges will be passed through to customers without markup.				
The total kilowatt-hour usage shown on your monthly invoice (Billed Usage) is provided by the Transmission and Distribution Utility (TDU). Usage for each time-of-day billing period shown above is determined from interval data from your advanced meter (Interval Data) and is also provided by the TDU. If the totaled Billed Usage and totaled Interval Data do not match, the Interval Data will be proportionately adjusted so the sum of all intervals equal the Billed Usage provided by the TDU.
